

Editorial Policy

Criteria for Authorship

Each author of the manuscript should have made an important scientific contribution to the study and be thoroughly familiar with the original data. The Editors expect that each author has read the complete manuscript and has taken the responsibility for the content and completeness of the manuscript and to understand that if the paper, or part of the paper, is found to be faulty or fraudulent, that he/she shares responsibility with his/her coauthors.

Procedures for Changes in Authorship after Submission

All substantial changes in authorship (additions, removals, or change of order) requested after first submission must be approved by the Editor-in-Chief. Changes must be requested by the corresponding author and sent to editor.nujps@nirmauni.ac.in. The Editor-in-Chief reserves the right to accept the request, reject the request, withdraw the manuscript from consideration/publication, or retract a published article based on the nature and extent of the circumstances related to the request. All decisions by the Editor-in-Chief in these matters are final.

Errata

NUJPS makes every effort to publish error-free manuscripts, providing authors with page proofs before publication. There are occasions, however, when it is necessary to publish a correction. Errata may be sent directly to editor.nujps@nirmauni.ac.in. The author will be assessed page charge(s) for errata that result from author error. The journal will cover the costs of errata that are a result of the editing process.

Misconduct

NUJPS only accepts research papers that are original works, no part of which has been published or is being considered for publication elsewhere except as brief abstracts. Duplicate publication, falsification, plagiarism, or fabrication will be considered actionable misconduct. Misconduct does not include honest error or honest differences in interpretations or judgments of data. NUJPS recognizes its responsibility to ensure that the suspicion of misconduct has been addressed, but the journal does not make such determinations and does not accept anonymous accusations.

If scientific misconduct is confirmed by institutional review, the Editor-in-Chief will report this to NUJPS's Publications and Communications Committee (PCC). Actions on misconduct will be decided in consultation with the NUJPS PCC. Violations considered severe may warrant official withdrawal of a published article or rapid rejection of a manuscript at any stage before publication. If no scientific misconduct is found, the manuscript (if unpublished) will be scheduled for publication. For errors in a published article not deemed to be misconduct, an Erratum or Letter to the Editor will be published. If there is a disagreement about the results of the investigation, the Editor-in-Chief reserves the right to restrict the author(s) from publishing in the journal for a specified period of time. The institutions should then make an inquiry and report back to the Editor-in-Chief. Until the matter is clarified, no papers by any authors on the disputed manuscript will be considered for publication.

Peer Review Process Including Rebuttal Policy

All reviewers remain unknown to the authors. Every manuscript is treated by the Editors and reviewers as privileged information, and they are instructed to exclude themselves from review of any manuscript that might involve a conflict of interest or the appearance thereof. Upon submission of a manuscript, authors must suggest five potential reviewers who have not seen the manuscript before submission. Authors may request disqualification of up to four potential reviewers. Only those individuals who would represent a direct conflict of interest should be excluded. Authors cannot make an extensive or blanket disqualification of a group of possible reviewers, e.g., all potential competitors in one or more industrial laboratories or academic departments. Requests to disqualify reviewers will be honored at the discretion of the Editor assigned to the manuscript. All the manuscript reviewed through NUJPS will peer reviewed with two reviewers preferable one from India and other may be outside country. If reviewers gives opposite opinion than editor-in-Chief may take opinion of third reviewer for the final decision for the manuscript. The review process will be double blind process and will not disclose the name on either side.

Conflict of Interest Disclosure

Authors of all the articles are required at the time of submission to disclose any potential conflict of interest (e.g., consultancies, stock ownership, equity interests, patent-licensing arrangements) and that they accept full responsibility for the conduct of the study, had full access to all the data, and controlled the decision to publish. Failure to do so may jeopardize eventual publication. Such potential conflict, unless already disclosed in the submitted article, will be held in confidence while the paper is under review. If the article is accepted for publication, information on the potential conflict of interest will be included in the acknowledgments section of the article.

Statement on the Ethical Use of Humans and/or Animals in Research

For human or animal experimental investigations, it is a prerequisite to provide a formal review and approval, or review and waiver, by an appropriate institutional review board or ethics committee and should be documented in your paper along with approval number. For investigations undertaken on human subjects, the manner in which the informed consent was obtained from the study participants (i.e., oral or written) should be stated in the Methods section. Authors are encouraged to obtain patient consent when they use confidential case material. Consent is not necessary in the case of very brief case vignettes which do not contain identifying information or if the case material is disguised sufficiently to prevent identification of the patient. In obtaining consent, the author(s) should discuss the purpose(s) of publication, the possible risks and benefits to the patient and the patient's right to withhold or withdraw consent. In the case of a minor patient, consent should be obtained from the parent(s) or guardian(s) and assent should be obtained from the patient.

Standard Protocol on Approvals, Registrations, Patient Consents & Animal Protection: All clinical investigations must be conducted according to the Declaration of Helsinki principles. Authors must comply with the guidelines of the International Committee of Medical Journal Editors (<http://www.icmje.org>) with regard to the patient's consent for research or participation in a study. Patients' names, initials, or hospital numbers must not be mentioned anywhere in the manuscript (including figures). Editors may request that authors provide documentation of the formal review and recommendation from the institutional review board or ethics committee responsible for oversight of the study. All investigations involving humans or animals reported in its publications must be conducted in conformity with these principles. In addition, all investigations involving humans or animals must be approved by an appropriate institutional review committee.

Access to Unique Materials such as Cell Lines, Organisms, and Software

Authors whose papers published in NUJPS are obligated to honor any reasonable request by qualified investigators for unique propagative materials, such as cell lines, hybridomas, DNA clones, and organisms that are described in the paper. If computer software programs are developed and used in submitted manuscripts, the programs must be made available to the reviewer upon request. The source code or the program must be made available, either commercially or in downloadable form from the authors, if the manuscript is accepted for publication. The Journal reserves the right to deny further publication rights to authors unwilling to abide by these principles.

Copyright and Permissions Policy

NUJPS holds copyright for the protection of authors. Authors Copyright of published manuscripts is held by NUJPS, which must receive the assignment of copyright from the authors of accepted manuscripts. Authors seeking permission to republish portions of their own work published in the Journal, authors seeking to republish material in publications owned by not-for-profit organizations, and students wanting to include material in dissertations, thesis, etc., should submit a permission request to the editorial office.

Redundant (multiple) publication/ Re-publication:

Abstracts and posters at conferences, results presented at meetings (for example, to inform investigators or participants about findings), results databases (data without interpretation, discussion, context or conclusions in the form of tables and text to describe data/information where this is not easily presented in tabular form) are not considered to be prior publication. Authors who want to publish translations of the articles that has been published elsewhere should ensure that they have appropriate permission(s), should indicate clearly that the material has been translated and re-published, and should indicate clearly the original source of the material. Editor-in-Chief may request copies of related publications if they are concerned about overlap and possible redundancy.

Disclaimer:

No responsibility is assumed by NUJPS, its staff or members of the editorial board for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products instruction, advertisements or ideas contained in a publication by NUJPS.

Dr. Jigna Shah
Editor-in-Chief
